ABSTRACTED-PUB-NO: DE 29810548U

BASIC-ABSTRACT:

The gearwheel has at least one endface (20 or 22) made with a breakthrough or a recess. The gearwheel may be made of metal or plastics. Each gearwheel may have endface recesses (24,26) of the same depth in each endface.

The circumferential surface sectors of these recesses run parallel to the adjacent gear flanks and to the gear head, and may become narrower with depth. If the teeth are external, the recesses extend radially beyond the base circle of the teeth into the wheel body.

USE - Lightweight gearwheel forming part of gear pump.

ADVANTAGE - Lighter rotor.

CHOSEN-DRAWING: Dwg.2/4
